Our Traceability System

EU Regulations 1069/2009 and 142/2011 establish rules regarding animal by-products and derived product, focusing on their safe handling, processing, and traceability to mitigate potential health risks

One of the primary features of the traceability system is its ability to enable real-time monitoring of the movement of animal by-products and derived products. It offers flexibility by providing access to commercial documents and records through various devices, including PCs, iPads, and iPhones

We enable operators to maintain accurate and complete digital records in compliance with these EU regulations. These capabilities equip operators with the tools needed for quick reactions to health risks, emphasizing the importance of rapid response in such scenarios

Digital Traceability System Features

Here is Key functionalities

Essential Traceability

Ensuring compliance by tracking animal by-products from origin to disposal, providing a clear and accurate audit trail

Risk Categorization

Classifying materials by EU-mandated risk levels ensures proper handling and disposal to mitigate health risks

Digital Documentation

Digitalizing documentation as per Regulation 142/2011 ensures accuracy and easy access for inspections

Instantaneous Data Access

Providing instant data access for swift health risk response, complying with EU regulations for immediate availability

How does the System Work

Here is how our system transforms the management of animal by-products

Seamlessly manage commercial documents and records from collection to disposal, ensuring compliance and easy access

Every shipment becomes a comprehensive digital document detailing necessary information, streamlining the process from dispatch to delivery

Easy Digital Recordkeeping, providing access to and management of your commercial documents from any PC, iPad, or iPhone, with PDF export
